		11. CONTRACT/GRANT NO.
12. SPONSORING AGENCY NAME AND ADDRESS Office of Research and Development U.S. Environmental Protection Agency 401 M Street, S. W. Washington, DC 20460		13. TYPE OF REPORT AND PERIOD COVERED Final - March 1973 - Nov. 1973
		14. SPONSORING AGENCY CODE
15. SUPPLEMENTARY NOTES Prepared in cooperation with the U.S. Environmental Protection Agency, National Environmental Research Center, Las Vegas, Nevada 89114		
16. ABSTRACT Annual total phosphorus and total nitrogen loadings to the lake were estimated and subdivided according to either point or non-point source origin. An assessment of the lake's trophic condition and limiting nutrient is also provided. All data collected by the U.S.E.P.A. National Eutrophication Survey during the one year study of the lake and its tributaries are included in the report.

FOREWORD

The National Eutrophication Survey was initiated in 1972 in response to an Administration commitment to investigate the nationwide threat of accelerated eutrophication to freshwater lakes and reservoirs.

OBJECTIVES

The Survey was designed to develop, in conjunction with state environmental agencies, information on nutrient sources, concentrations, and impact on selected freshwater lakes as a basis for formulating comprehensive and coordinated national, regional, and state management practices relating to point-source discharge reduction and non-point source pollution abatement in lake watersheds.

ANALYTIC APPROACH

The mathematical and statistical procedures selected for the Survey's eutrophication analysis are based on related concepts that:

- a. A generalized representation or model relating sources, concentrations, and impacts can be constructed.
- b. By applying measurements of relevant parameters associated with lake degradation, the generalized model can be transformed into an operational representation of a lake, its drainage basin, and related nutrients.
- c. With such a transformation, an assessment of the potential for eutrophication control can be made.

LAKE ANALYSIS

In this report, the first stage of evaluation of lake and watershed data collected from the study lake and its drainage basin is documented. The report is formatted to provide state environmental agencies with specific information for basin planning [§303(e)], water quality criteria/standards review [§303(c)], clean lakes [§314(a,b)], and water quality monitoring [§106 and §305(b)] activities mandated by the Federal Water Pollution Control Act Amendments of 1972.

Beyond the single lake analysis, broader based correlations between nutrient concentrations (and loading) and trophic condition are being made to advance the rationale and data base for refinement of nutrient water quality criteria for the Nation's fresh water lakes. Likewise, multivariate evaluations for the relationships between land use, nutrient export, and trophic condition, by lake class or use, are being developed to assist in the formulation of planning guidelines and policies by EPA and to augment plans implementation by the states.

ACKNOWLEDGMENT

The staff of the National Eutrophication Survey (Office of Research & Development, U. S. Environmental Protection Agency) expresses sincere appreciation to the Florida Department of Environmental Regulation for professional involvement and to the Florida National Guard for conducting the tributary sampling phase of the Survey.

Joseph W. Landers, Jr., Secretary of the Department of Environmental Regulation; John A. Redmond, former Director of the Division of Planning, Technical Assistance, and Grants; and Dr. Tim S. Stuart, Chief of the Bureau of Water Quality, provided invaluable lake documentation and counsel during the survey, reviewed the preliminary reports, and provided critiques most useful in the preparation of this Working Paper series.

Major General Henry W. McMillan (Retired), then the Adjutant General of Florida, and Project Officer Colonel Hugo F. Windham, who directed the volunteer efforts of the Florida National Guard, are also gratefully acknowledged for their assistance to the Survey.

SOUTH LAKE
STORET NO. 1238

I. INTRODUCTION

South Lake was included in the National Eutrophication Survey as a water body of interest to the Florida Department of Environmental Regulation. Tributaries and nutrient sources were not sampled, and this report relates only to the lake sampling data.

South Lake was surveyed by the Florida Game and Freshwater Fish Commission from 1966 to 1973 (Dingell-Johnson projects, 1966-1973).

II. CONCLUSIONS

A. Trophic Condition:

Survey data indicate that South Lake is eutrophic. It ranked twelfth when the 41 Florida lakes sampled in 1973 were compared using an index of six parameters*. Fifteen of the lakes had less median total phosphorus, 17 had less and one had the same median orthophosphorus, 11 had less and two had the same median inorganic nitrogen, 13 had less mean chlorophyll a, and 12 had greater and one had the same mean Secchi disc transparency.

Survey limnologists noted floating and submerged aquatic vegetation at all sampling times.

B. Rate-Limiting Nutrient:

The algal assay results indicate nitrogen limitation at the time the sample was collected (03/15/73). The lake data indicate nitrogen limitation at all sampling times.

* See Appendix A.

III. LAKE CHARACTERISTICS[†]

A. Lake Morphometry*:

1. Surface area: 4.46 kilometers².
2. Mean depth: 0.9 meter.
3. Maximum depth: 1.0 meter.
4. Volume: 4.01×10^6 m³.

B. Precipitation**:

1. Year of sampling: 131.3 centimeters.
2. Mean annual: 142.1 centimeters.

[†] Table of metric conversions--Appendix B.

* No bathymetric map available (surface area obtained from U.S.G.S. quadrangle map; depths estimated from sounding reported in Appendix C).

** See Working Paper No. 175, "...Survey Methods, 1973-1976".

IV. WATER QUALITY SUMMARY

South Lake was sampled three times in 1973 by means of a pontoon-equipped Huey helicopter. Each time, a near-surface sample for physical and chemical parameters was collected from one station on the lake (see map, page v). During each visit, a single depth-integrated (near bottom to surface) sample was collected for phytoplankton identification and enumeration; and a similar sample was collected for chlorophyll a analysis. During the first visit, a single 18.9-liter surface sample was taken for algal assays.

The sampling results are presented in full in Appendix C and are summarized in the following table.

A. SUMMARY OF PHYSICAL AND CHEMICAL CHARACTERISTICS FOR LAKE SOUTH

	Total	10,439

2. Chlorophyll a -

<u>Sampling Date</u>	<u>Station Number</u>	<u>Chlorophyll a (µg/l)</u>
03/15/73	1	49.6
09/05/73	1	12.2
11/05/73	1	7.7

C. Limiting Nutrient Study:

1. Autoclaved, filtered, and nutrient spiked -

<u>Spike (mg/l)</u>	<u>Ortho P Conc. (mg/l)</u>	<u>Inorganic N Conc. (mg/l)</u>	<u>Maximum yield (mg/l-dry wt.)</u>
Control	0.035	0.408	10.3
0.050 P	0.085	0.408	11.5
0.050 P + 1.0 N	0.085	1.408	22.0
1.0 N	0.035	1.408	14.5

2. Discussion -

The control yield of the assay alga, Selenastrum capricornutum, indicates that the potential primary productivity of South Lake was high at the time the sample was collected. A significant increase in yield occurred with the addition of nitrogen alone, but the addition of phosphorus alone did not result in a significant difference in yield as compared to that of the control. Therefore, nitrogen limitation would be expected.

The lake data also indicate nitrogen limitation. The inorganic nitrogen to orthophosphorus ratios were 9 to 1 or less at all sampling times.

APPENDIX B

CONVERSION FACTORS

CONVERSION FACTORS

Hectares x 2.471 = acres

Kilometers x 0.6214 = miles

Meters x 3.281 = feet

Cubic meters x 8.107×10^{-4} = acre/feet

Square kilometers x 0.3861 = square miles

Cubic meters/sec x 35.315 = cubic feet/sec

Centimeters x 0.3937 = inches

Kilograms x 2.205 = pounds

Kilograms/square kilometer x 5.711 = lbs/square mile
